***Response to Amendment***

1. This Office Action is in response to Amendment filed on date: 3/28/06.

Claims 5-8 are still pending.

***Response to Arguments***

2. Applicant's arguments with respect to claims 5-8 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Hsieh (U.S. 5,416,815).

With respect to claim 5, Hsieh discloses a non-contacting rotary joint for wideband transmission of digital signals between at least one first nit and a second unit

in figures 1 and 2 (Column 1, lines 34-36). Hsieh discloses a data source/transmitter, element number 13, for generating and transmitting serial data streams, element number 14, through a conductor array (Column 2, lines 37-39). Hsieh also discloses a second unit with a receiver, element number 16, for receiving signals tapped by receiving antenna, element number 18 (Column 2, lines 41-49). Hsieh further discloses a data sink, element number 24, for subsequent processing of the signals received by the receiver (Column 2, lines 56-59). Hsieh teaches a filter in the receiver for adaptation to transmission characteristics of a data transmission between the transmitter and receiver that are rotatable relative to each other along the rotary joint (Column 3, lines 21-39).

With respect to claim 6, Hsieh discloses that the filter can be dynamically adjusted (Column 3, lines 21-39).

With respect to claim 7, Hsieh discloses that a micro controller, element number 22, is provided for controlling and diagnosing the device (Column 2, lines 52-54).

With respect to claim 8, Hsieh discloses that the device is self-learning and dynamically adapts itself to respective conditions of operation (Column 3, lines 21-39).

### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
